AAD05300-AAD05379 represent cDNAs corresponding to 28 human secreted protein genes, and AAE01436-AAE01513 represent the proteins they encode. AAE01514-AAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the

mutations in the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 28 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental aborders and include developments for the immune system, aboramalities, haematopoletic disorders, diseases of the immune system, aboramalities, neamatopoletic disorders, diseases, of the immune system, allergies, neurological disorders, (e.g., Alzheimer's disease, strinson's disease), cognitive disorders, schizophrenia, asthma, sylvinson's disease), cognitive disorders, schizophrenia, atheroscierosis, cardiovascular disorders, angiogenic disorders, atheroscierosis, cardiovascular disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in diagnostic immunosasays e.g., radioimmunosasay or enzyme linked in diagnostic immunosasays e.g., radioimmunosasay or enzyme linked immunosarbent assay (ELISA). The present sequence represents a human cereted protein of the invention.

Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases

Claim 8; Fig 4; 209pp; English.

Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, postiasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chisease, osteoarthritis, Lyme's disease, cachesia and autoimmune diseases e.g. myasthemia gravis, autoimmune diabetes and systemic lupus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in forensic biology, for diagnostic assays, prognostic assays, prognostic assays, pharmacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a contraint TANGO expression. A wide range

of cellular disorders can be treated

producing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful impene therapy: A composition containing a polypucleotide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervopathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Include the Activity thes such as: Immune system suppression, Activin/inhibin activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

The present invention describes primer sets for synthesising 5602

Cull-length cDNAs defined in the specification. Where a primer set

cull-length cDNAs defined in the specification. Where a primer set

comprises: (a) an oligo-dT primer and an oligonucleotide comprises one of

to the complementary strand of a polynucleotide which comprises one of

cligonucleotide comprises at least 15 nucleotides; or (b) a combination

of an oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide which complementary to a

sequence and an oligonucleotide comprising a sequence complementary to a

complementary strand of a polynucleotide which comprises a 5'-end

complementary strand of a polynucleotide sequence complementary to a

complementary strand of a polynucleotide sequence which comprises a 3'-end sequence/3'-end sequence is selected from those defined in

the 5'-end sequence/3'-end sequence is selected from those defined in

the specification. The primers are useful for synthesising polynucleotides,

con a sequence and an olignosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers are also useful for the

consistent and/or diagnosis of the abnormality of the proteins encoded by

consistent and specialised methods. AANB3646 to

AANB95893 represent human cDNA sequences; and AANB3622 to AANB362
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Wilebrand factor-associated disorder, requilate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectrasis, pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral cochems, hydrocephalus and encephalitis, and treat hepatic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a human TANGO 216 polypeptide. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular TANGO 267. The TANGO polypeptides can be used to modulate cellular adhesion. The proteins can be used to treat any von Willebrand (actor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, and/or function of cells that appear in the bone marrow, and leukocytes, creat bone marrow, blood and hematopoietic associated diseases and disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cardiovascular disorders such as ischemic heart diseases or cells and to treat bone and/or cartilage associated diseases or diseases, inflammations, backness, brain herniations, latrogenic colsease, inflammations, backness, brain herniations, latrogenic colsease, inflammations, backness, mustible sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic brain cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel human and murine secreted proteins designated TANGO 216, 261, 266, 266 and 267 useful as modulating agents of cellular processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 488;

```
describes TANGO 266, TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, modulate cell trafficking and/or migration, modulate cellular adhesion, modulate cell adhesion in proliferation disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TANGO 266; TANGO 216;; TANGO 261; TANGO 262; TANGO 267; cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoletic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; schemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; hazheimer's Disease, cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.

ARBIBASS-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, and TANGO 267. The TANGO 262 and TANGO 267. The TANGO 262 and TANGO 267. The TANGO 262 callular proliferation, modulate cellular adhesion. The cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, requiate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, adioacters, such as cancer, modulate the proliferation, differentiation and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, spleen associated diseases, modulate renal disorders, reat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, as ischemic heart diseases, modulate the proliferation, differentiation, as ischemic heart diseases with the ovaries, and cerebral oedema, cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral codema, corplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

Contectial and viral meningitis, and treat hepatic disorders.

Contectial and viral meningitis, and treat hepatic disorders.

Contectial and viral meningitis, and treat hepatic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120 IALTDGELHEDLFFYSEREANRSRDLGAIVYCVGVKDFNETQLARIADSKDHVFPVNDGF 179

                                                                                           The invention relates to isolated nucleic acid molecules encoding novel human secreted extracellular matrix proteins (SPS). The novel human secreted extracellular matrix proteins (SPS). The polynucleotides and proteins are used to prevent, treat a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For example, disorders associated with decreased expression of SPS. The SP polynucleotide or a vector expressing them may be administered to treat diseases by gene therapy. Antisense molecules may be administered to down regulate expression. The polynucleotides may also be used as DNA probes in diagnostic assays. The SPS may also be used as antigens to produce antibodies and to identify modulators (agonists and antagonists) of the SPS. The anti-(SP) antibodies and antagonists may also be used to down regulate expression and activity of SP and as diagnostic agents for detecting the presence of SPS in samples. The disorders include for example: immune/autoimmune diseases (e.g. HIV) (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), cancers and hyperpoliferative discorders (e.g. melanomas, neoplasms of the breast or liver, Sezary syndrome and carrived as a disease), neurological diseases (e.g. Alzheimer's disease, server a product of a product of a cardiac and antiple of cardial and antiple of cardial diseases (e.g. Alzheimer's disease).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  arrest, tachycardia and angina), infections caused by bacteria, viruses and fungi and ocular disorders (e.g. corneal infections). Other uses include wound healing, maintenance of organs before transplantation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        STRGTTLMKLTEDREQIRQGLEELQKVLPGGDTYMHEGFERASEQIYYENRQGYRTASVI 119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a murine TANGO 216 polypeptide. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes,
                                                                                                                                                                                                                                                                                                                               cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -
                                                                                                                                                                                                                                                                                             TANGO 216;; TANGO 261; TANGO 262; TANGO 267
                                                                                                                                                                                                                           Amino acid sequence of a murine TANGO 216 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Fraser CC;

AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 267, and TANGO 267. The TANGO CC describes TANGO 266, TANGO 267, and TANGO 267. The TANGO CC cellular differentiation and/or modulate cellular adhesion. The cellular differentiation and/or modulate cellular adhesion. The disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular adhesion, condulate cell adhesion in proliferative disorders, such as cancer, and cell trafficking and/or migration, and/or function of cells cand hematopoietic associated diseases and disorders, atelectasis, bronchial pulmonary congestion or oedema, emphysema, chronic bronchial, bronchial conducter renal disorders, spleen associated astemates, modulate the proliferation disorders, spleen associated as ischemic heart disease, modulate the proliferation, differentiation, as ischemic heart disease, modulate the proliferation, differentiation, cartilage associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, latrogenic disease, inflammations, treat disorders associated with the ovaries, and cerebral codema, hydrocephalus and encephalitis, alzheimer's bisease, inflammations, brain cancers, bydrocephalus and encephalitis, and treat hepatic disorders.

Contellage associated disease, multiple sclerosis, brain cancers, bydrocephalus and encephalitis, and treat hepatic disorders. It was notes the present sequence does not appear in the specification; it was notes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               191 KKSCIEILAAEPSTICAGESFQVVVRGNGFRHARNVDRVLCSFKINDSVTLNEKPFSVED 250

AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO cescribes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular adhesion. modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, differentiation, and/or function of cells modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, bulmonary congestion or cedema, emphysema, chronic bronchitis, bronchial sthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate the proliferation, differentiation, as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral codema.

CC cartilage associated with the ovaries, and cerebral codema, bacterial and viral meniations, disease, inflammations, brain herniations, disease, cerebral toxpelasmosts, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disease, in the specification; it was note: the present sequence does not appear in the specification; it was created using information provided.

```
AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated adsorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular adhesion, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchila
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TANGO 266; TANGO 216;; TANGO 261; TANGO 267; cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchietasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; latrogenic disease; hydrocephalus; Alzhelmer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.

                                                                                                                                                           Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft eagents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, psoriasis, inflammatory bowel diseases, septic shock, ulcerative colltis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme's disease, cachexia and autoimmune disease, e.g. myasthemia gravis, autoimmune diabetes and systemic lupus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial transgenic animals and the TANGO polypeptides themselves. Partial cranscopenomics and for monitoring clinical trials. TANGO plarmacogenomics are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a disorder associated with aberrant TANGO expression. A wide range
                                             Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          161 QLARIADSKDHVFPVNDGFQALQGIIHSILKKSCIEILAAEPSTICAGESFQVVVRGNGF 220

Cell Surface glycoprotein CD11c precursor - human

Cell Surface glycoprotein CD11c precursor - human

N;Alternate names: leukocyte adhesion receptor p150,95 alpha chain

C;Species: Homo sapiens (man)

C;Species: AL: Garcia-Aguilar, J: Springer, T.A.

J: Biol. Chem. 265, 12750-12751, 1990

A;Residues: 1-1163 < COR>

A;Note: this revision to the sequence from reference A35543 includes the carboxyl end

A;Note: this revision to the sequence from reference A35543 includes the Carboxyl end

A;Note: this revision to the sequence from reference A35543 includes the Carboxyl end
